

# Active Shooter Security Seminar and Exercise

November 16, 2011

PORT ARTHUR CIVIC CENTER • 3401 CULTURAL CENTER DRIVE • PORT ARTHUR, TEXAS 77642

Given today's ever-changing threat environment, Critical Infrastructure owners and operators should consider having an incident management plan for an active shooter event or hostage taking at their facility. Successful plans will include components on: communication with employees; employee accountability; familiarization with local emergency responders and understand the services they offer; coordination and communication with first responders; and a public affairs component. In turn, emergency responders must be familiar with their jurisdiction's facilities.

The **Industry of Southeast Texas**, the **Industrial Safety Training Council**, and the **Beaumont Emergency Services Training Complex**, with support from the **National Protection and Programs Directorate Office of Infrastructure Protection** within the **U.S. Department of Homeland Security**, is addressing this need with its latest Security Seminar and Exercise program aimed at fostering communication between facilities and their local emergency response teams in response to an active shooter event. The one-day facilitated seminar will focus on emergency responder and facility coordination, interoperability capabilities, communications protocols, best practices, and integration of local assets.

#### Who Should Participate?

- Corporate and facility security professionals from the private and public sectors
- First Responders
- Homeland Security Representatives
